DTM PREP is an acid-based metal conditioner designed to chemically etch bare metal substrates for improved adhesion while also converting light surface rust and protecting against future corrosion.

An excellent choice for use after sandblasting, DTM PREP neutralizes flash rust and turns surface oxidation into iron phosphate — a dark gray colored conversion coating that protects metal from further corrosion until it can be coated with ENDURO PRIME DTM Primer, DIRECT PRIME DTM Primer or another direct to metal primer.

- PHOSPHORIC ACID PRE-TREATMENT ETCHES BARE METAL
- WATER-BASED FORMULA, NO VOC
- PACKAGED READY FOR USE, NO MIXING
- CONVERTS SURFACE RUST INTO IRON PHOSPHATE
- PROTECTS AGAINST FUTURE CORROSION
