This is a mild pre-cleaner designed for use after a surface has been sanded, or any time Wax & Grease Remover may be too aggressive. Use Surface Wash as a final pre-cleaner to remove sanding debris, fingerprints, oils and other contaminants before applying any coatings.

Surface Wash may also be used to neutralize Kirker’s DTM PREP Acid Etch Wash (6860).

Strong solvents soften and lift sanding debris and other contaminants, so they may be wiped away leaving a clean surface ready for paint.
